

50/50 HYDRAULIC SYSTEM

**INNOVATIVE, PRECISE,
EFFORTLESS**

UNIQUE FEATURES

The hydraulically-operated 50/50 System combines the best features from our SST-II Bi-Fold and Single-Swing Systems. The 50/50 provides an incredibly clean opening, requires minimal space in the open position and requires no maintenance, making it perfectly suited for architectural, commercial and residential designs.

EASE OF INSTALLATION

If transport allows, the 50/50 System is supplied fully assembled within its own pre-hung frame which is easily positioned in the rough opening and mechanically fastened or welded in place. Incredibly user-friendly, the 50/50 arrives with the hydraulic lines bled and the door pre-wired for installation.

FINISH

Though glass is most common, the 50/50 System allows for sash inserts of virtually any material, allowing the customer to best match their surrounding environment
